The introduction of the Fairchild digestive preparations and processes marked an era in applied physiological chemistry. It was the practical beginning of our appreciation of the value of digestive ferments, of their scope and service in the nutrition of the sick. If, as it has been said by its founder, the art of medicine owes its existence to a recognition of the fact that food and regimen proper in health were unsuited to the sick, surely the art of medicine has made a great advance in learning to effect digestion by proxy; by borrowing from the lower animals the organic principles by which food may be converted into the...
