F Small quantities of ammonia get into the air from the decomposition of organic matter, and after thunderstorms nitric acid and ozone are sometimes found. The air is a colourless mixture chiefly of two gases, with smaller and varying proportions of other gases. Its density is 1.293, 1 litre at 0 C. and 760 mm. pressure weighs 1.293 gr. (-0896 x 14-45). It allows substances to burn in it, the products of combustion being the same as those formed by burning the same substances in oxygen, only the air being oxygen diluted with nitrogen the action is not nearly so energetic. The air is essential to the life of animals, the carbon of their bodies uniting with the oxygen of the air to form carbon dioxide CO₂, and this expired carbon dioxide is the source from which plants obtain the...
